

### REMARKS

The claims have been amended to correspond to the subject matter of former dependent claim 11. Therefore, the amendment is enterable as a matter of right.

Dependent claim 11 was rejected under Section 103, based on Khan, with the office action suggesting that Khan discloses the detecting of the occurrence of a predetermined time and automatically transferring information to a wireless device at the predetermined time, citing column 2, lines 35-62 and column 11, lines 12-36. The only mention of time in column 2 in the cited material is the reference to real time at line 36 which seems irrelevant. In addition, in lines 45 and 46 in column 2, an option is discussed that retrieved content be updated after a predetermined amount of time has expired. But this is not commensurate with detecting a time and automatically transferring information to the device at a predetermined time. There is no suggestion of using a predetermined time as a trigger and no suggestion that the information is automatically transferred to the wireless device at a predetermined time.

Similarly, there is a mention at lines 55-59 of column 2 of sending an alert. But this is not commensurate with detecting an occurrence of a predetermined time and automatically transferring the aggregated information to the wireless device at the predetermined time. The alert is simply an alarm-type alert that does not involve, in any way, the transfer of aggregated information.

Similarly, the cited information in column 11 does not call for aggregating information and transferring that aggregated information at a predetermined time.

As mentioned in the present specification, the transfer at the predetermined time enables the user to receive information he desires at a time he desires. Thus, the user can set the time when the aggregated information is collected and provided.

In view of these remarks, the application is now in condition for allowance and the Examiner's prompt action in accordance therewith is respectfully requested.

Respectfully submitted,

Date: June 9, 2003
